

The “W” post has come out of the need for a sturdy, lightweight alternative to the classic timber fencing post, which is the biggest issue with fences today.

The hot dip galvanised surface of these posts make them extremely durable in-ground and easily capable of outlasting the rest of your fence.

The purpose of our design is to make a fence post that is functional, practical and allows for use of the same materials and tools that you would use with a timber post.

It is intended to be user-friendly for all facets of fencing, including capped, sloped land, raked panels, double plinth as well as the standard.

LIFETIME PINE is an independent family-owned business established in 1988. We are a specialist outdoor timber supplier. Our main focus is trade but DIY is always welcome.

INTRODUCING THE “W” POST

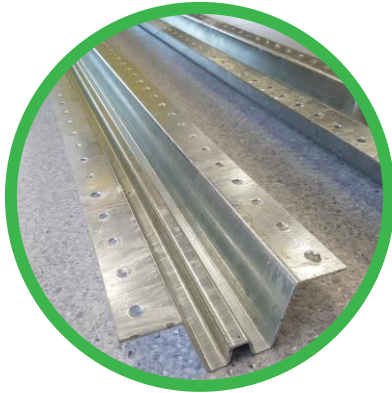

HD GAL STEEL FENCE POST

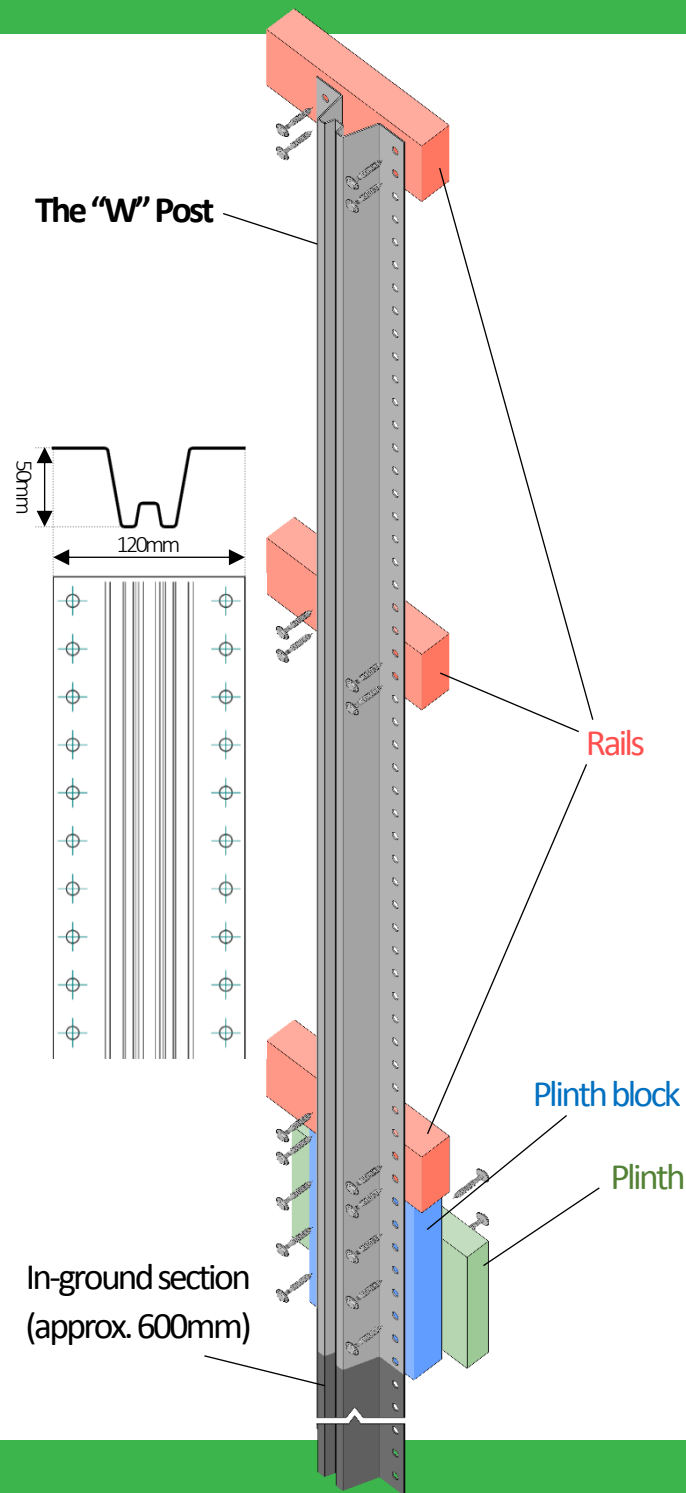

LIFETIME PINE

Outdoor Timber Specialists

The “W” Post

- Unique “W” profile creates strength while keeping post lightweight
- Hot dip galvanised surface means this post will easily outlast the rest of the fence
- The 7mm holes at 30mm intervals down both sides of the post provide maximum flexibility to cope with any variations in the fence’s construction
- Available in various lengths
- Only one post type required – Adapts to standard plinth, double plinth and capping easily
- A simple alternative solution to stabilise/ repair existing fences

Easy to
screw rails
onto from
behind

Use a
sleeper as
plinth block
